

FOR IMMEDIATE RELEASE

Global Reset 2017 – BITNATION Token Sale Event Launches the Pangea Jurisdiction for Creating Nations on the Blockchain

Amsterdam, Netherlands, October 2nd, 2017 – Before nations, before borders, there was the Supercontinent Pangea. Since then the world has been divided by tectonic schisms, widening oceans and, more recently, stifling politics. Nation states are cracking apart under the weight of local and global challenges that they seem incapable of solving. Rather than embracing a borderless economy and increasing personal freedoms, nation states and multilateral organizations have overseen a resurgence in bureaucracy and protectionism, and ever more intrusive incursions into our personal lives. If we are to prevent a drift towards tyranny, this must come to an end. This autumn, BITNATION intends to reset society by initiating another tectonic shift with the launch of the Pangea Jurisdiction, and the Pangea Arbitration Token (PAT) Token Sale Event (TSE).

BITNATION, a Decentralized Borderless Voluntary Nation (DBVN), was founded in July 2014 and started piloting blockchain records as peer-to-peer governance services. In 2015, BITNATION launched the first version of Pangea and later that year launched software to provide blockchain IDs for refugees (winning the UNESCO NETEXPLO 2017 Grand Prix) and a blockchain Public Notary in partnership with Estonia's e-Residency Program. “*BITNATION and Estonian government start spreading sovereign jurisdiction on the blockchain*” reported the [International Business Times](#), and the Notary has since been used by thousands of people for down-to-earth practical purposes such as registering births, marriages, wills, land titles, business deals and more.

“BITNATION’s Pangea Jurisdiction will allow us to reclaim our security, autonomy and freedom from those who wish to oppress us with unjust laws and surveillance. Pangea will empower anyone in the world to create their own

*nations, communities or collectives, choose their own code of law, make agreements peer-to-peer, and resolve disputes without interference from 3rd party legacy entities. It will make current governance systems redundant. Pangea is **The Internet of Sovereignty**.*" - says Susanne Tarkowski Tempelhof, BITNATION's Founder.

"Combining the power of our encrypted, quantum-safe communications mesh network code base, with a user-friendly, smartphone chat interface, Pangea will radically empower us to take governance tools and data back into our own hands."

BITNATION's newest release of the Pangea Jurisdiction will be powered by PAT, an Ethereum (ERC20) token that serves as a proof-of-reputation for Citizens. It is distributed on Pangea when Citizens create a contract, successfully complete a contract, or resolve a dispute related to a contract. PAT is an algorithmic reputation token; an arbitration currency based on user and contract performance, rather than a purchasing power, popularity or attention.

BITNATION will launch the new version of Pangea, the PAT token and the TSE simultaneously, livestreaming the creation of new nations on the platform throughout the day with BITNATION's team on hand to help users set up their own Nations on Pangea. Several groups are already preparing to create new Nations during the launch, including a stateless refugee who wants to provide services to people in the same situation, agriculturalists building a nation for peer-to-peer harvest insurance and seed sharing, and Venezuelan activists determined to provide an opt-in alternative to the Venezuelan Government.

"Venezuela is the poster child for all that is wrong with the existing nation-state model. We have a fake government, fake elections, fake money, even fake opposition groups. But it's not as different as you might think in other countries. It's time for the nation state concept to get a makeover. If you really care about the Venezuelan situation I hope you agree with us and support "E-Venezuela", our brand new decentralized, virtual, borderless and oil-less nation on the Pangea blockchain Jurisdiction" - says the Venezuelan activist Dagny Ramirez.

Tune in to witness some wicked creative solutions to very real governance problems!
